

User Scenario

What is a User Scenario?

- A **User Scenario** is a narrative that describes how a user interacts with a product to achieve a goal.
- It is based on real-life situations and helps designers create user-centered experiences.
- Scenarios focus on user needs, motivations, and pain points.

Why Are User Scenarios Important?

- Helps in understanding user behavior and expectations.
- Guides the design of intuitive and user-friendly interfaces.
- Assists in defining key user flows and usability improvements.
- Supports team collaboration by aligning stakeholders with user needs.

Key Elements of a User Scenario

- **User Persona** – Who is the user?
- **Context** – Where and when is the user interacting with the product?
- **User Goal** – What does the user want to achieve?
- **Motivation** – Why is the user engaging with the product?
- **Pain Points** – What challenges does the user face?
- **Expected Outcome** – What should be the ideal result?

How to Create a User Scenario?

- **Identify Target Users** – Define user personas.
- **Determine the Context** – Understand real-world situations where users interact with the product.
- **Define the Goal** – What is the user trying to achieve?
- **Describe the Interaction** – Step-by-step journey of how the user engages with the interface.
- **Consider Pain Points** – Identify obstacles and frustrations.
- **Define the Ideal Outcome** – What should be the final experience?

Types of Scenarios

a. Goal or Task Based Scenarios

Goal- or Task-Based Scenarios state only what the user wants to do.

Do not include any information on how the user would complete the scenario.

These scenarios are useful in helping to define your site architecture and content.

You should give these types of scenarios to users in a usability test. It gives them a reason and a goal for going to the site, but it lets them show you how they would use the site to accomplish that goal.

E.g: how Paul uses an app to order flowers for his mother's birthday,
or how Sarah buys a train ticket on a kiosk machine for her journey home

Types of Scenarios

b. Elaborated Scenarios

Elaborated Scenarios give more user story details. These details give the Web team a deeper understanding of the users and users' characteristics that may help or hinder site interaction.

Knowing this information, the team is more likely to develop content, functionality, and site behaviour that users find comfortable and easy to work with.

Types of Scenarios

c. Full Scale Task Scenarios

Full Scale Task Scenarios include the steps to accomplish the task. A full-scale scenario can either report all the steps that a specific user currently takes to accomplish the task or it can describe the steps you plan to set up for users in the new site.

Scenarios at this level are very similar to use cases, but they lay out the steps from the user's point of view rather than from the website's point of view. They explain how the site supports the goal-oriented scenarios that you started with.

Thank you.
