

Information Architecture

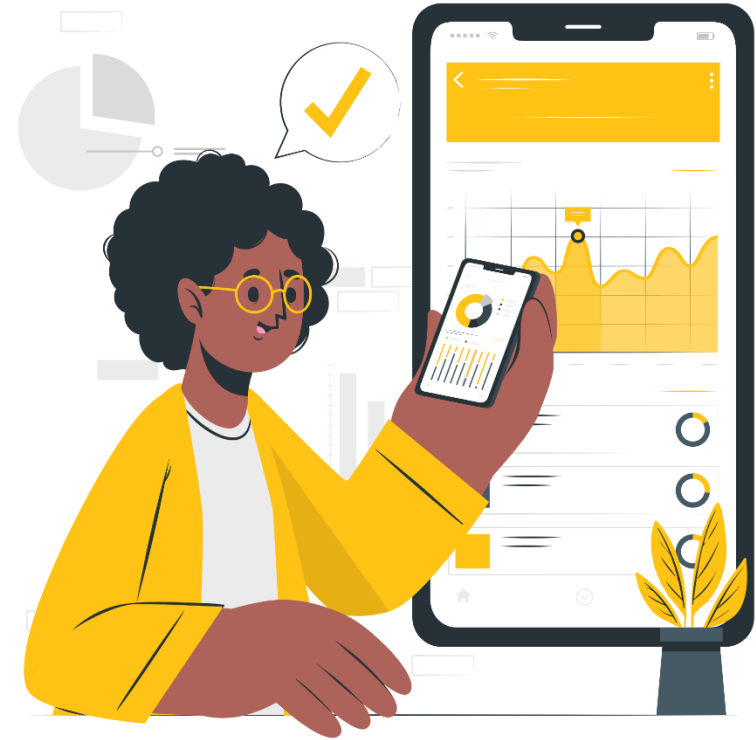

What is Information Architecture (IA)?

- The process of organizing and structuring content in digital products
- Helps users find information and complete tasks easily
- Involves labeling, navigation, and hierarchy
- Ensures intuitive access to information

Why is IA Important in UX Design?

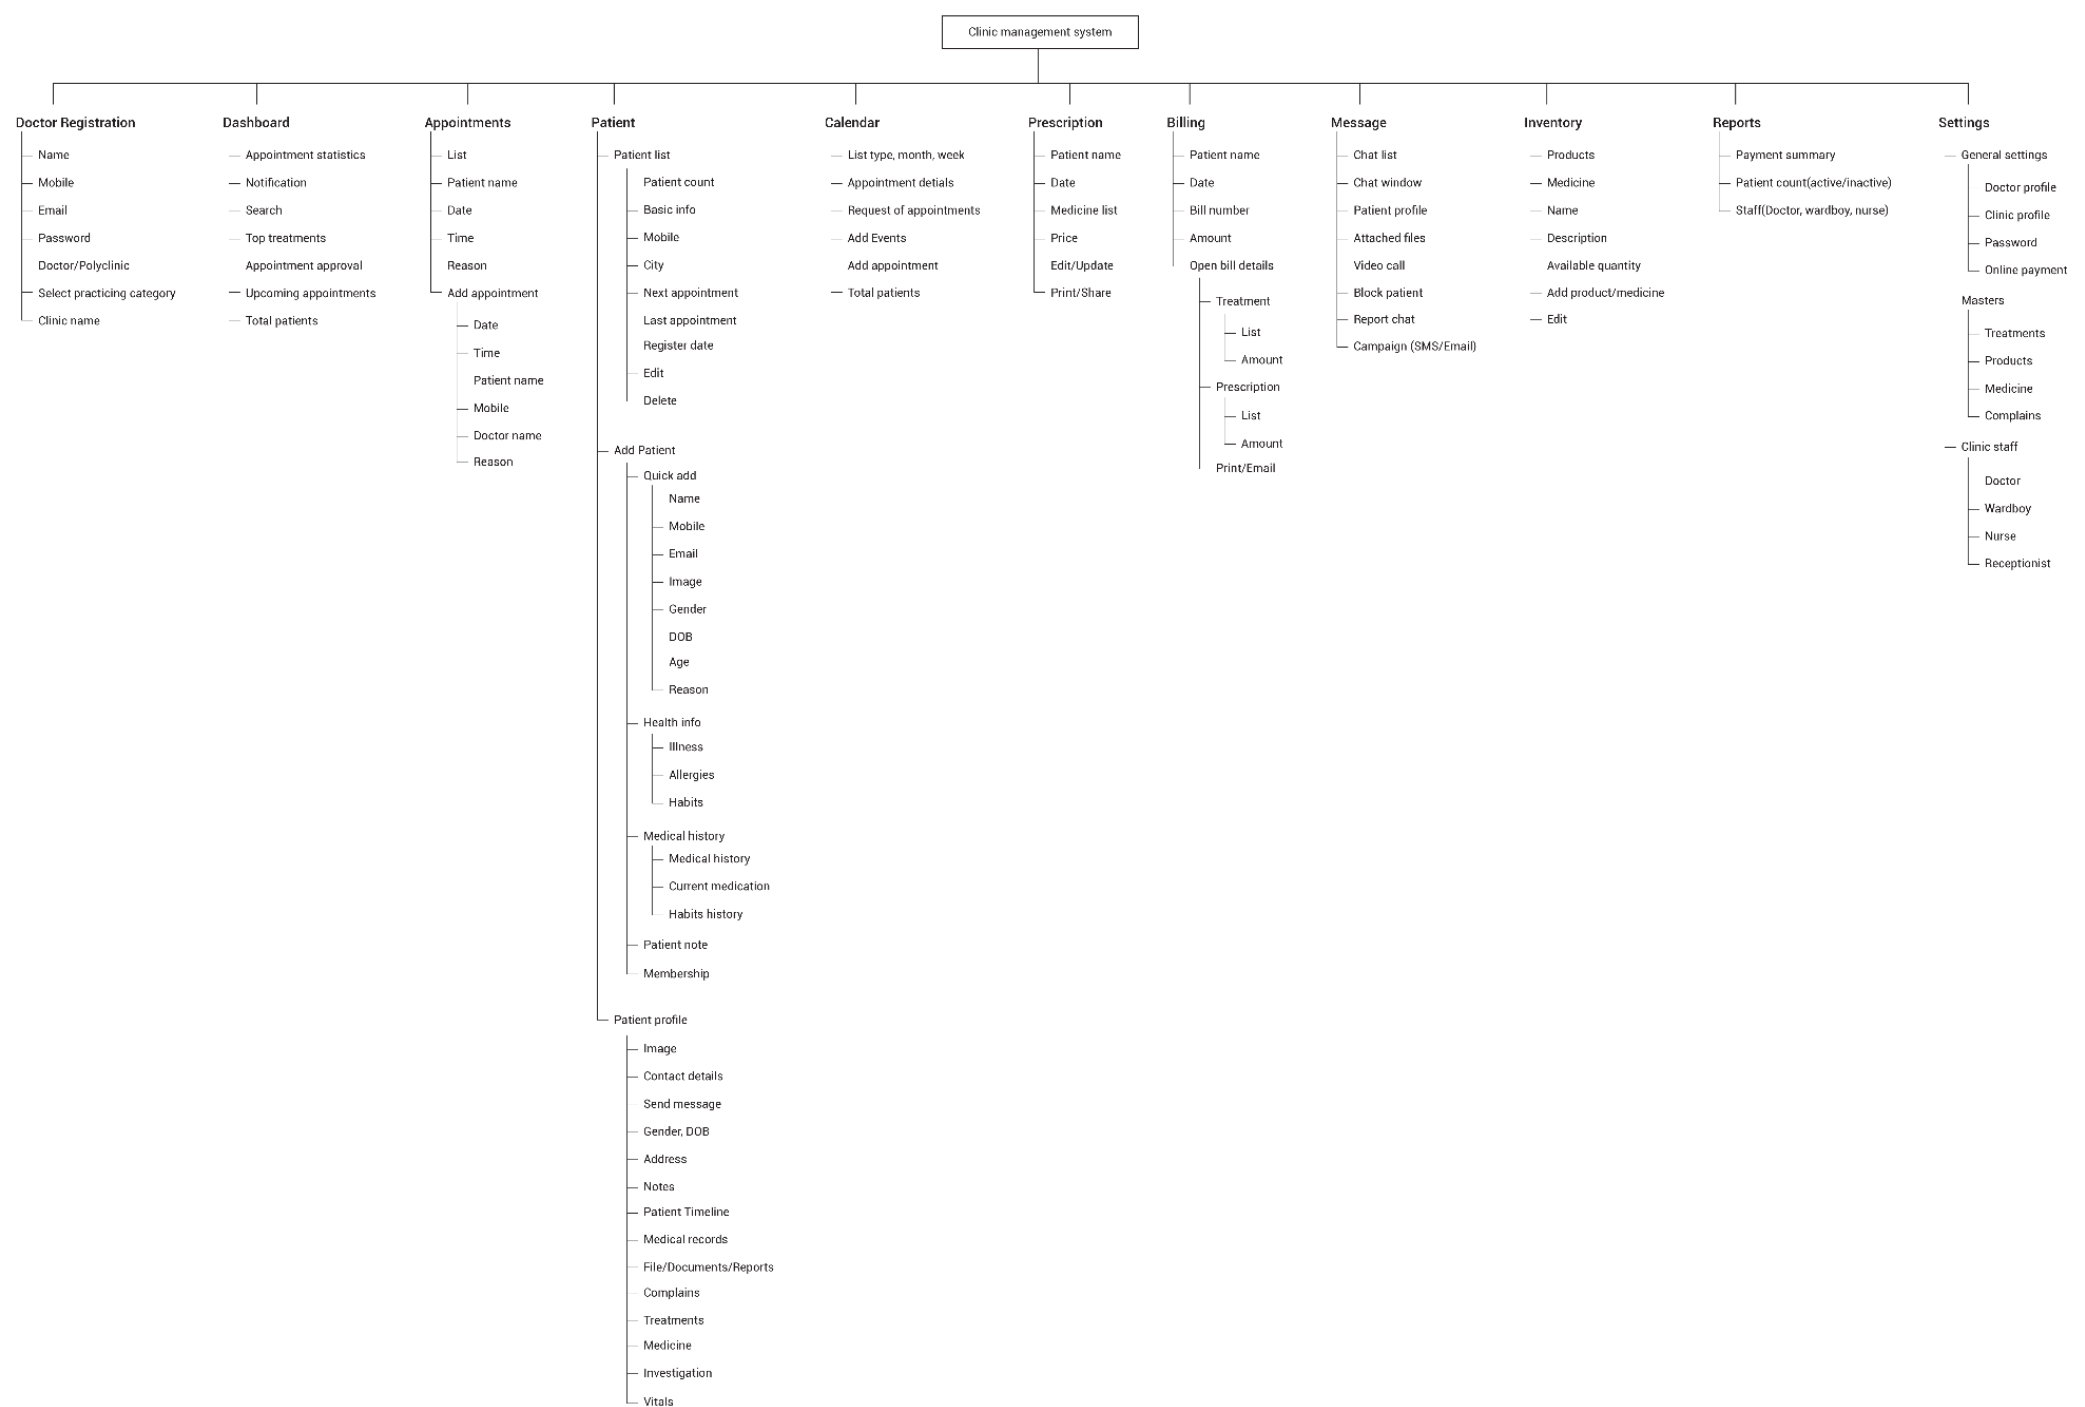

- Enhances usability & findability
- Reduces cognitive load
- Improves user satisfaction
- Ensures consistency across screens
- Affects how users perceive the product

Core Components of Information Architecture

- **Organization Systems** – How content is grouped (e.g., categories)
- **Labeling Systems** – How content is represented (e.g., menu names)
- **Navigation Systems** – How users move through content (e.g., menus, tabs)
- **Search Systems** – How users look for content

What is a Site Map?

- A visual or textual model of a website/app's structure
- Shows the hierarchy and relationship between pages
- Blueprint of the product's navigation and content flow

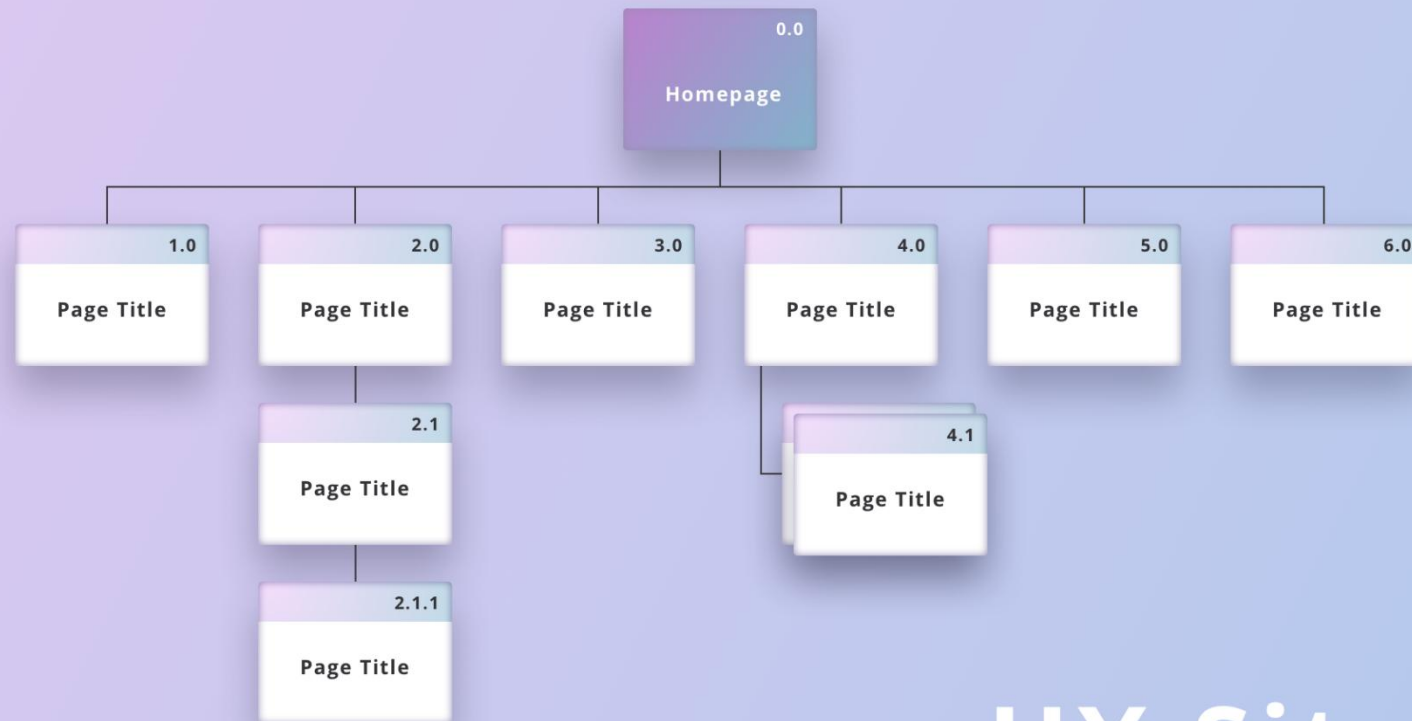

Purpose of a Site Map

- Helps stakeholders understand app/website structure
- Guides designers and developers
- Ensures complete coverage of user needs
- Helps define content strategy
