# MVP, Alpha, Beta: Stages of Product Development

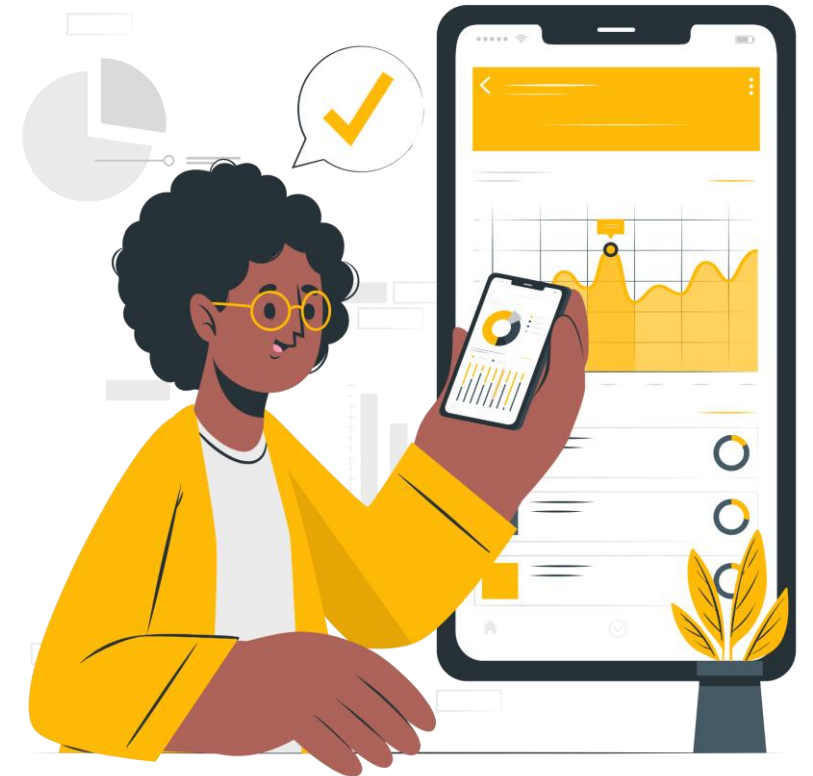

## 1. Minimum Viable Product (MVP):

- **Purpose:** Test core functionality with minimal effort.
- **Example:** Instagram MVP focused only on photo sharing.

### Steps to Build an MVP:

- 1 Identify core features
- 2 Develop and launch quickly.
- 3 Gather feedback and iterate.

# MVP, Alpha, Beta: Stages of Product Development

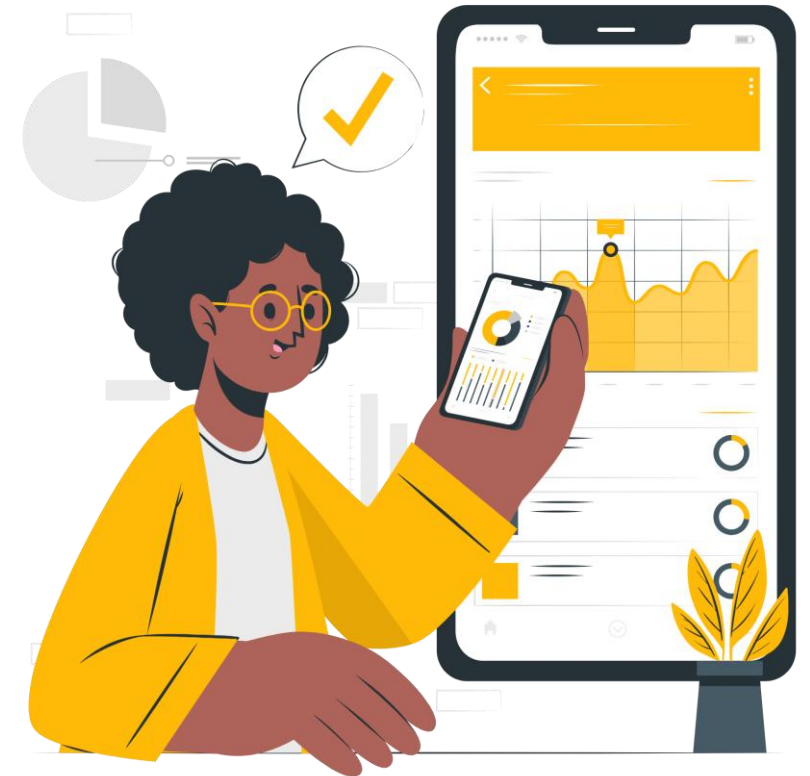

## 2. Alpha Testing:

A preliminary version of the product tested internally to identify bugs and improve functionality.

- **Purpose:** Ensure basic usability and stability before user-facing tests.

### Key Activities:

- Test product flow within the development team.
- Identify and fix major issues.
